to me, Jason

Hi Darrell,

As a follow-up to our discussion on the circulators for Fenner's Ditch here are more details on cost, brands, electricity etc.

We are recommending approximately 6 units near the back half of the canal. There are 2 different options that residents can consider depending on their preference.

- Kasco 1 HP Floating Horizontal AquatiClear Circulator. These units do not need to be mounted to a dock but do require 120V power source. They require a minimum of 30 inches of water to work properly.
  - Cost: \$2,175.00
  - Approximate cost of electricity: \$85.00/month
- Kasco 1 HP Dock Mounted AquatiClear Circulator. These units must be mounted to a dock and require 120V power source
  - Cost: \$2,075.00
  - Approximate cost of electricity: \$85.00/month

PLM will install the units for ~\$100.00/unit. However the resident must have established power source by the water.

Example of the Circulator with the Horizontal Float  
Mounted Unit

Example of the Dock
