Hi Paul,

Wow what a difference a month makes in plant growth. June was exceptionally warm, so it is no surprise. Unfortunately, we found quite a bit of milfoil and starry stonewort growth and the lake needs a pretty significant treatment. Attached is the map detailing treatment areas. Below is the associated cost of treatment. If approved, we will get this treated on Tuesday.

Filamentous algae – 8 acres using SeClear G (.2 ppm) = \$640.00

Starry stonewort (SSW) & EWM growth – 20 acres using SeClear G, Diquat/Flumioxazin combo = \$17,000.00

SSW growth – 8 acres using SeClear G (1 ppm) = \$3,200.00

EWM growth – 4 acres using ProcellaCOR = \$2,760.00

Grand Total = \$23,600.00

Thank you,

Jaimee Desjardins, Environmental Scientist
